

Coming Soon!

Our most powerful drill yet

Pacific Drilling Co announces the newest drill rig coming to our fleet, the MARL M10. This will not only be our most powerful rig, with twice the rotary torque of our Wolverine M5, but will be configured to perform auger, mud rotary, air rotary and CPT! It will also be equipped with the increasingly popular eSPT digital, self calibrating Auto Hammer. Additionally this rig comes with a sophisticated virtual safety cage around the rotary tooling to ensure the safety of all onsite personnel. We expect this rig to be available for booking in January of 2019.
